Ahmed Nasser

AI & Software Engineer @JPadel Sports | Certified GCP Associate
Cloud Engineer

Alexandria, Alexandria, Egypt

Summary

AI Engineer with experience in Machine Learning, Deep Learning, Computer Vision, and NLP, backed by 5+ years of software development experience. Skilled in LLMs, chatbot development, fine-tuning, RAG pipelines, and state-of-the-art 3D Computer Vision methods. Proficient in Python and modern AI frameworks, with experience deploying scalable AI solutions in cloud environments. Strong software engineering background and passion for building impactful AI products.

Experience

JPadel

1 year 6 months

Artificial Intelligence Engineer

May 2025 - Present (1 year 3 months)

Egypt

Developed a production-grade AI chatbot using LangGraph that transforms natural language into complex real-time database queries through structured agent workflows and RAG-based contextual grounding, while conducting R&D on integrating LLMs and Model Context Protocol (MCP) to enhance contextual understanding, seamless AI integration, scalability, reliability, and secure data processing within an AWS-deployed environment.

Software Engineer

February 2025 - May 2025 (4 months)

Egypt

Worked closely with the development team to enhance and maintain mobile application performance by developing backend Cloud Functions, automating workflows, generating analytical user reports for marketing insights, troubleshooting and resolving application issues, and contributing to feature improvements and responsive UI enhancements to deliver a stable and user-friendly experience.

M.I.A. Robotics

Software Engineer

September 2024 - Present (1 year 11 months)

Alexandria, Egypt

Software Engineer specializing in web development for ROV systems, creating responsive and intuitive interfaces tailored for robotics and remote operations. Experienced in integrating real-time control and telemetry with ROS, and passionate about building scalable, user-focused solutions that bridge the gap between software and hardware.

eJad

AI & Automation Engineer

September 2025 - December 2025 (4 months)

Cairo, Egypt

I worked on building intelligent automation tools powered by Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG). I designed workflows that integrated LLM capabilities into software testing and development processes, enabling smarter template generation, code automation, and dynamic test creation. I also contributed to improving the project's RAG pipeline by organizing data sources, optimizing retrieval quality, and ensuring more accurate and context-aware model outputs.

Alongside the LLM work, I developed supporting Python tools and a PyQt6 interface to streamline configuration editing, automate build/run/execute steps, and display real-time process output.

Robo-Tech

Software Engineer

June 2022 - December 2023 (1 year 7 months)

Alexandria, Egypt

I take pride in my contributions to the development of groundbreaking ROV technology. From enhancing real-time data visualization to refining control mechanisms, my work ensures that our ROVs stand out in terms of efficiency, versatility, and adaptability.

Education

Alexandria University

Bachelor of Computer & Communication · (2021 - 2026)
